PARTNERING FOR IP TELEPHONY
CONVERGE WITH THE EXPERTS:

Mitel

DataComm

RingCentral

Mitel is proud to introduce Mitel Connect, a remarkable innovation in IP telephony and unified communications. The first of its kind, Mitel Connect is a platform built on a single software code base that means you can design your communications system any way you choose: as a managed service from the cloud, as a hardware system you manage yourself, or as a hybrid deployment where some locations and applications are managed in the cloud and others are managed onsite. You choose.

Mitel Connect isn't just a phone system—it's a phonetext-mobile-conference-video-web share-online meeting system that's sleek and easy to use, and:

- Allows you to communicate according to your individual preferences

- Makes enterprise communications as easy to use as your personal ones

- Escalates your conversations from an IM, to a call, to an online meeting, to a web desktop share with or without video – with the single click of a button

- Enables you to collaborate as easily with groups outside your company as those inside

- Eliminates the need for plug-ins, complicated set-ups, and multiple application windows and passwords before you can get your work done

FAST FACTS

- One of first to market with IP telephony systems integration

- Certified and authorized reseller of Mitel IP telephony and RingCentral equipment .

- Complete solution from initial planning through day to day managed services

- Flexibility for customers with existing routers and switches

- Total customer control - the network is yours. Outsource a "little or a lot" from our 24x7 managed services portfolio

- Optimization reviews are part of the managed services portfolio

> *Our mission is to deliver a communications experience that our customers love.*

PARTNERING FOR IP TELEPHONY
CONVERGE WITH THE EXPERTS:

DataComm

Mitel

RingCentral

ONE PLATFORM WITH THREE DEPLOYMENT MODELS

**Mitel
Connect ONSITE**
Owner maintains and
controls the system

Mitel

RingCentral CLOUD
Fully UCaaS

RingCentral

One Platform.

Whether for **RingCentral** or **Mitel:** communicate with and schedule with Active Directory, Outlook and popular ICS calendars like Google. A single platform provides a simple way to access all communication options, no matter if you're using your personal smartphone, office phone, laptop or office computer.

Two delivery choices.

Organizations have the opportunity to have their phone system delivered as a product with an onsite phone system (via Mitel Connect) or as a service from the cloud (RingCentral) . This empowers executives to align communications investments with their business models either as a capital expenditure (Capex) or operational expenditure (Opex).

Two ways to deploy.

Organizations can choose the communication system that best suits their needs: a cloudbased phone system with RingCentral or an onsite phone system with Mitel Connect ONSITE. Both have advantages depending on the particular needs of your company.
